Business Recommendations

Focus on profitable products and categories, not just high sales.
Control excessive discounts to protect profit margins.
Strengthen high-performing regions and sales channels.
Improve customer value by focusing on high-performing segments.
Use monthly and yearly trends for better sales and inventory planning.
Track Sales, Profit, Profit Margin, Orders, Customers, and AOV together

Conclusion

This project uses Power BI to transform sales transaction data into an interactive Sales & Financial Performance Dashboard. The dashboard analyzes sales, profit, customers, regions, products, channels, discounts, and time-based performance using KPIs, DAX measures, and interactive filters

PROJECT OUTCOME

The project transforms raw sales data into meaningful business insights using Power BI.
The data was prepared, analyzed, and converted into key KPIs and interactive visualizations.
The dashboard provides a clear view of sales, profit, customers, products, regions, channels, and trends.
It helps identify business performance, growth opportunities, and areas for improvement.
Overall, the project supports faster and better data-driven business decisions.

CHALLENGES AND HOW THEY WERE OVERCOME

1. Data Cleaning: Handled data types, duplicates, missing values, and inconsistent data using Power Query.

2. Data Modeling: Created a dedicated Date table and connected it with the sales data for accurate analysis.

3. KPI Calculation: Used DAX measures to calculate Sales, Profit, Profit Margin, Orders, Customers, and AOV.

4. Time Analysis: Used the Date table to analyze monthly and yearly sales and profit trends.

5. Dashboard Design: Organized KPIs, charts, slicers, and filters into focused pages for clear business insights.
